The sample files are intended to show agencies what the files could look like and for testing Broker file submissions. They are not intended to be fully submittable.

FABS File: The FABS file will generate FABS38.4.1 errors based on a false AwardingOfficeCode to keep the rows from being accidentally published.

> *Rule FABS38.4.1: When provided, AwardingOfficeCode must be a valid value from the Federal Hierarchy, including being designated specifically as an Assistance Awarding Office in the hierarchy at the time the award was signed (per the Action Date).*

This can be easily cleared by replacing 888888 with a valid AwardingOfficeCode for the agency being tested.

The DABS files are based on the Department of Housing and Urban Development's FY 2024, Period 11 DABS submission.

File A: the Broker generated file based on data from GTAS.

File B: will have one B9 warning and B28 errors for all rows until the PARK data is available in the Broker. After the PARK data is available in the Broker the File B will still have B28 errors for the value of "none" in the file where a PARK was not assigned.

File C: will generate warnings and errors related to PYA and PARK data but the headers are in the file. The file has over 200,000 rows to test loading and validating a large file. This file may be updated in the future.
