

Introduction

The Office of Payment Integrity (OPI), Do Not Pay Business Center (DNP) offers the Eligibility Tool in conjunction with other DNP analytics services to reduce agency burden when researching a high-volume of matches. The Eligibility Tool uses a suite of death and eligibility data sources to return matches that are prioritized and ranked, which enables DNP customers to review more conclusive matches.

How Does It Work?

1 Payment or payee data files

To minimize agency burden, the Eligibility Tool can ingest any payee or payment file, including an existing Payment Automation Manager (PAM) file or bulk file submitted to the DNP Portal for Batch Matching or Continuous Monitoring.

2 Matched against DNP data

The Eligibility Tool matches your data against the full range of death, debarment, debt, and other data sources available to DNP.

3 Results rank ordered

The matched results from the Eligibility Tool are scored and ranked by each data source category (i.e., death, debarment, debt) to provide a single, summed eligibility rating for each payment or payee. Matches are prioritized and returned in a user-friendly interface via a secure data connection.

What Are the Benefits?

Enhanced matching

Advanced matching capabilities and logic for more conclusive, high-quality results

Streamlined verification

Reduce time-consuming improper payment research efforts and quickly identify at-risk improper payments

Improved data integrity and quality

Increase confidence in payment integrity and internal controls
